

Engineering Deployment Guide

Department: Engineering

Deployment Environments

The company maintains three environments: development, staging, and production. Code must pass all tests in staging for a minimum of 24 hours before being promoted to production.

CI/CD Pipeline

All services use GitHub Actions for continuous integration. Every pull request triggers automated unit tests, linting, and a security scan.

Production Deployment

Production deployments require sign-off from at least one senior engineer and must be scheduled during the deployment window of Tuesday to Thursday, 10 AM to 4 PM IST.

Rollback Procedure

If a production deployment causes a critical failure, the on-call engineer must trigger an automatic rollback to the previous stable version.
